

Test Results on 4/24/2017

Results are exactly the same as the results from 4/20/2017.

The only difference is that the fault from the conference word cloud has been fixed.

Now, the test case for a populated paper list after clicking a word from a conference word cloud passes.

```
Feature: Conference word cloud
  Once clicking on a conference name, a new list is generated

  Scenario: Paper should contain the following titles # features/papers/ConferenceWordCloud.feature:4
    Given I click on the first conference from the list for term and Bengio # FeatureContext::iClickOnTheFirstConferenceFromTheListFo
    (TermAndBengio())
    Then I should be on the word cloud for IEEE Transactions # FeatureContext::iShouldBeOnTheWordCloudForIeeeTransacti
    ons()

  Scenario: Fixing bug with word cloud generated by conference # features/papers/ConferenceWordCloud.feature:8
    Given I click on the first conference from the list for across and Lee # FeatureContext::iClickOnTheFirstConferenceFromTheListFor
    acrossAndLee()
    And I click on the word second # FeatureContext::iClickOnTheWordSecond()
    Then I should be on a populated paper list page # FeatureContext::iShouldBeOnAPopulatedPaperListPage()
```
